## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jager in view of Keesmann et al.

Referring to claim 2, Jager discloses a field emission display substantially as claimed. See FIG. 1, 2 and respective portions of the specification. Jager discloses a field emission display including a front substrate 6, a rear substrate 10, a cathode lines 11, anode lines 9r, 9g, 9b phosphor 7r, 7g, 7b formed on the anode lines and extraction electrodes 19 parallel to the anode lines 9r, 9g, 9b. Jager does not disclose a field emission display including carbon nanotubes formed on the cathode lines. Keesmann et al. disclose a field emission display (see col. 7, lines

15-20) including carbon nanotubes 31 formed on the cathode lines providing stable emission (see col. 3, lines 35-40. It would have been obvious to form carbon nanotubes 31, as disclosed by Keesmann et al., in the display, as disclosed by Jager, for the advantage of providing stable emission.

Claim 1 is broader than claim 2. Consequently, claim 1 is rejected for the same reason as claim 2.

***Conclusion***
